

W99996-06002S Inventory Discrepancy Report

Investigated: 2026-09-25 | **Part:** W99996-06002S (Nut, Weld Square M6x1.0, EA) | **Source:** MTMFG, read-only

The Short Answer

The books for this part are internally exact - they just point at the wrong place. The part's auto-backflush location S-A1-01 has been charged 105,980 nuts while only ever being sent 51,573, so it reads **-54,407**. Physically there are **60,000** there right now, in 12 boxes of 5,000. That one location is a **114,407** difference, and it is the whole of this part's gap.

STILL OPEN TODAY: 54,407 NUTS (WO-073244 13,531 + WO-074263 40,876).

Where It Stands

Location	System	Physical	Difference
V-N2-02	150,000	150,000	0 - confirmed correct
S-A3-01	9,707	not counted	unknown
S-A0-02	6,000	not counted	unknown
S-A1-01	-54,407	60,000	+114,407
Part total	111,300	-	-

The other 30 location rows for this part are zero.

Why It Happened

- This is a weld nut. Nobody scans it. When an operator clocks out of the weld operation by barcode, the system **automatically writes off 4 nuts for every piece completed**.
- That write-off is hard-wired to S-A1-01 , because the part is flagged AUTO_ISSUE_LOC and DEF_BACKFLUSH_LOC there.

- Stock is never transferred into that location, so the write-offs outrun the transfers. It first went negative **2026-07-02** and has stayed negative since.

Checks Run

Check	Result
Ledger self-check (In - Out = on-hand)	Exact at 111,300
Receipt audit	All 14 deliveries posted; no unbooked receipt
Transfer pairing	All legs paired; no in-transit rows
Work-order consumption	Legitimate clock-out backflush at 4 nuts/piece
Open work orders	WO-074263 open, wants 11,577, received 0 , 40,876 already issued
Unposted issues	33,744 across 8 transactions
Open purchase orders	150,000 on order, not due until 2027
Cycle counting	Not used database-wide; this part not set up

Ruled Out

Rack mix-up (v-n2-02 confirmed correct), lost or duplicate records, unposted deliveries, broken transfers, wrong usage per piece, and a duplicate part number.

Shop-Wide, Not Just This Part

Scope	Rows	Negative on-hand
Warehouse 002, all locations	50	-139,704.85
s-* staging locations	4	-66,409.00
wc work centre	14	-42,662.85
v-* racks	7	-69.00

The negatives sit in the staging and work-centre locations, not in the racks. The reported whole-shop variance of ~85,000 is **smaller** than the negative staging total alone, so something elsewhere is likely overstating the books.

Do This Next

1. Count S-A3-01 and S-A0-02 to close out this part's physical total.
2. Post the V-N2-02 to S-A1-01 transfer that should have happened, and stop issuing from a location that is never stocked.
3. Clear or post the 33,744 unposted WO-074263 issues before period close.
4. Chase the whole-shop figure - it is smaller than the negative staging total, which points to overstatement somewhere.
